ACADEMIC PROJECT

Title : Fake Certificate Detection and Verification Using Blockchain Technology on Android Devices

The project focuses on detecting and verifying fake certificates using blockchain technology on Android devices. Traditional certificate verification methods are often slow and unreliable, which makes it easier for fake certificates to circulate. To solve this problem, the proposed system uses blockchain to store certificate data securely, making it tamper-proof and transparent. Educational institutions upload certificates to the blockchain, where each certificate is given a unique hash value for identification. Employers or organizations can verify the authenticity of a certificate through the Android application by checking the stored blockchain data. This system improves security, reduces manual verification time, and provides a reliable method for certificate authentication.

- Technology Used:** Blockchain, Android Application
- Purpose:** To prevent fake certificate usage and enable quick digital verification.
